

Decision Item
New Member Proposals
December 6, 2017 Executive Board Meeting

BACKGROUND:

To increase CaFCP’s capacity to successfully support hydrogen fuel cell vehicle commercialization, the CaFCP membership committee, with input and support from the Steering Team, proposes the following stakeholders as new members of CaFCP. Each proposed entity is already actively engaged in elements of fuel cell vehicle deployment and hydrogen infrastructure development, adds new and unique value to CaFCP, and provides new insights and perspectives to advance progress in commercialization activities.

With each member proposal, a recommended membership sector, tier and brief description is presented.

Entity	Sector	Tier
New Flyer <i>- The largest bus and coach manufacturer and distributor in North America with 50 years of zero emission experience, over a decade of California FCEB activities and Buy America compliant vehicles.</i>	Medium-Heavy Duty	Associate
Look, Inc. <i>- Consulting firm managing business critical programs and technology system implementations, including assisting Toyota with its complimentary hydrogen fuel card program and station assurance testing program.</i>	Service Provider	Associate
Sirius XM <i>- Provides radio programming and data information services such as traffic, weather and information to land, air and marine vehicles and connected devices, as well as connected vehicle services.</i>	Service Provider	Associate

IMPACT:

As members, each organization would add new insights, experience and value to CaFCP and help shape commercial rollout activities.

RECOMMENDATION:

Invite New Flyer, Look Inc., and Sirius XM to become Associate CaFCP members.
